What's New In AutoCAD?

Batch AutoSketch/Export/Save: Save up to 10 AutoCAD drawings into a single file, view them simultaneously in AutoCAD, and perform simple edits. (video: 3:47 min.) The input design history in AutoCAD is now being used as an integrated command for the Draw from Reference action. Draw from Reference now leverages the input design history to automatically reference an element to an imported object. (video: 4:24 min.) Using a numeric input, users can now create drawings that are derived from the input file. The new Create Derived drawing type gives you the power to create drawings from scratch or from an existing design. (video: 3:01 min.) AutoCAD now supports double precision floating-point input values. Double precision floating point values are used to represent large numeric values. (video: 1:41 min.) The Improve / Document Design workspace can now be shared with others on a network through a secure web browser. (video: 3:01 min.) Scales, Annotation and Dynamic Properties: Scale drawing objects as you work. When drawing, you can use the Scale command to change the scale of a dimension or annotation. If you want to work at a specific scale, the Scale command remembers the current scale. (video: 1:42 min.) Use the annotation tools to mark up and show drawings at various scales. You can zoom in on annotations as you view them. They can also be used as 3D annotations or tooltips to help understand the drawing. (video: 4:34 min.) Draw objects at a specific scale, and place them in the context of the drawing's current scale. (video: 1:39 min.) Create and animate dynamic properties to quickly add customizable features to drawings. (video: 3:01 min.) Security and Accessibility: To help prevent unauthorized changes to drawings, there is now an option in the Options dialog to automatically lock a drawing after it has been saved. We have sent out many mails requesting the demo, but to no avail. However, some of our readers have kindly sent in information which has now been added to the official website, which you can view [here](#).
